

The ENEN+ project has received funding from the Euratom research and training programme 2014-2018 under grant agreement No. 755576

mentorship programme for nuclear careers

The **ENEN+ project**, led by the European Nuclear Education Network (ENEN), has set up a Europe-wide programme of tutoring for **BSc Students** interested in getting more information on nuclear energy and, possibly, be enrolled in MSc courses in which nuclear matters are taught.

Nuclear energy has been recently declared by the European Commission to be in "**the backbone of a carbon-free European power system**" in 2050, together with renewable energy sources. So, there is a lot to do to assure a system of production of energy compatible with the environment in Europe. Nuclear energy has also several applications other than power production, involving medicine, biology, agriculture, industry.

If you want to be in touch with experts in the nuclear fields who may provide you information, suggestions and guidance in different sectors of the nuclear energy applications (from power generation to medicine, from space applications to future energy systems) **apply as a mentee**: you will receive personalised attention and suggestions.

ADVANTAGES TO BE A MENTEE:

- being mentored by professionals and young researchers in the field;
- being informed about opportunities of internships in the professional world;
- participating in Career Planning meetings;
- receiving financial support for mobility or participation in conferences (on a competitive basis).
