Part VIII – Research Activities

Keywords	Brief Description
Species distribution modelling	Starting from the concept of ecological niche, study the current and potential species distribution
Global change and biodiversity	Explore along the time dimension (forward and backward) the various effects of global changes on biodiversity, considering also genetic diversity

Biogeography	Explore patterns and processes of species distribution
Macroecology	Explore patterns and processes of life and its attributes (e.g. species, range size, abundances, species traits,...) at large regional and/or global scale, with a particular focus on terrestrial vertebrates
Conservation Biology	Use macroecology, biogeography, and spatial ecology in a more applied context to explore the opportunities and costs of conserving biodiversity at local and/or regional level, with a particular focus on terrestrial vertebrates

My research is strongly related to the key aspects of the official description (declaratoria) provided by MIUR for the field 05/B1: zoologia e antropologia. In fact the official description for Zoologia states that it includes "lo studio dei protozoa, dei metazoi, della loro evoluzione e biodiversità, ai vari livelli di organizzazione cellulare, organismica, di popolazione, specie e comunità. Le ricerche ... indagano sulla organizzazione morfo-funzionale ... interazioni intra- ed interspecifiche e con l'ambiente, biogeografia, sistematica e filogenesi degli animali ... Presenta rilevanza applicativa nel campo della valutazione, conservazione e gestione della biodiversità animale in natura; della caratterizzazione delle popolazioni in rapporto ad interventi di introduzione, ripopolamento e alla valutazione del loro impatto ambientale..."
