

CAREER OPPORTUNITIES

The placement survey on the Master Course STS students was carried out in June 2015. The web questionnaire was sent to all 114 students who have participated in and obtained the title of Master STS in the latest 10 years. The short semi-structured questionnaire contained open and multiple choice questions. A total of 89 out of 114 questionnaires were received (equivalent to 78% of participating students).

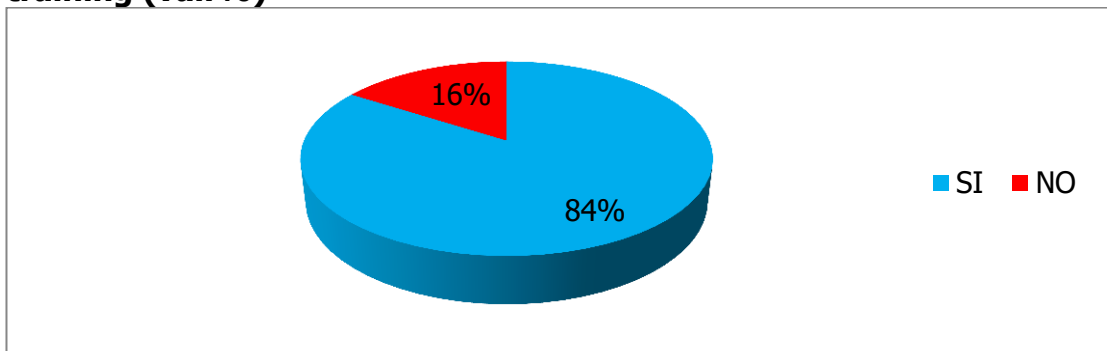

Number of participants in Master STS in the last 10 years (from 2005 to 2014 - val.%)

Database: 114 participants

At the end of the Master Course STS more than 80% of the students found an employment in the space sector or similar sectors. Companies (not only sponsor industries) often offer job opportunities even before the conclusion of the training period. The best result obtained by the Master STS is undoubtedly the great number of former students who have participated in the design and launch phases of the new ESA launcher Vega.

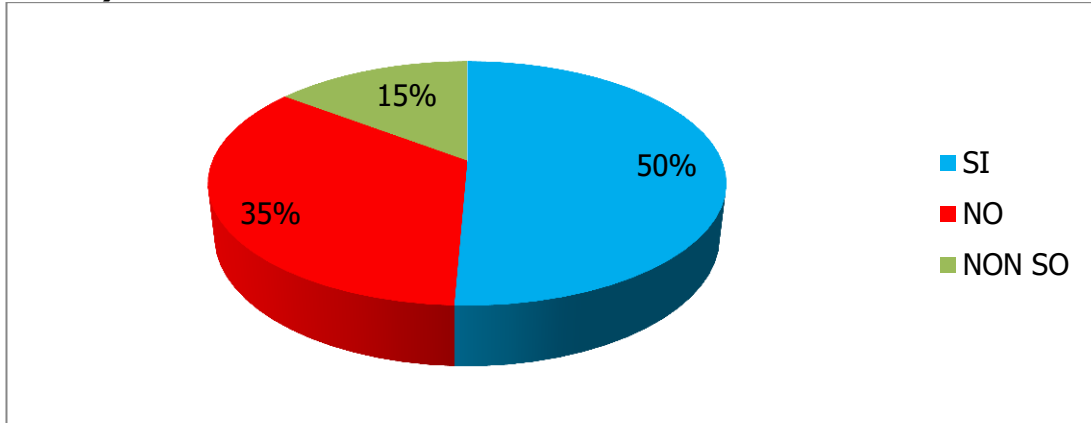

Number of participants Master STS employed at the end of the training (val.%)

Database: 75 responses

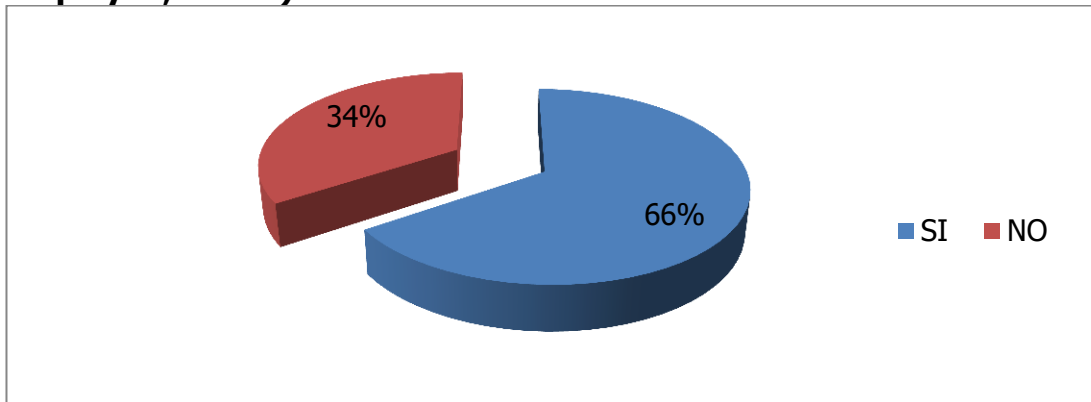

Number of participants in Master STS employed at the end of the training in the space sector (sub - sample students employed; val.%)

Database: 75 responses

Number of participants in the Master STS employed at the end of the training in one of the sponsor industries (sub - sample students employed; val.%)

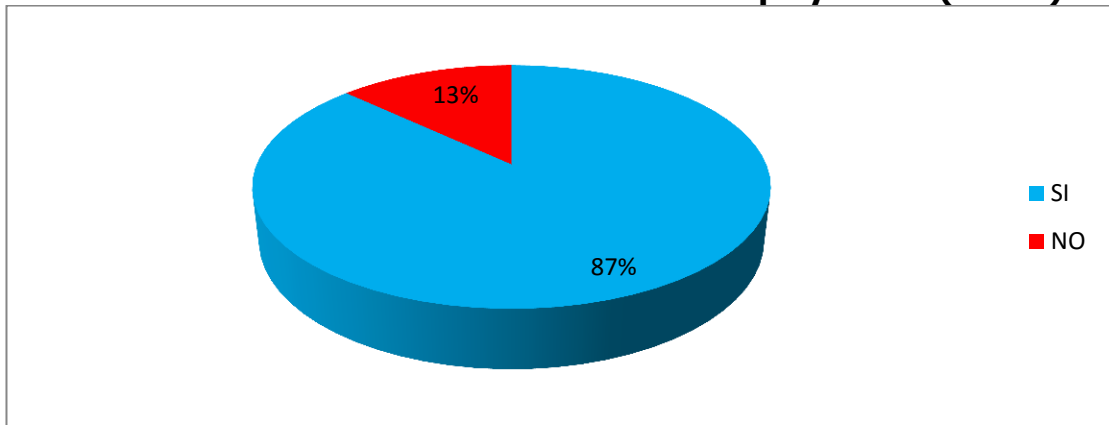

Database: 75 responses

75% of students who responded to the questionnaire is "very" or "fairly" satisfied with the training received; they believe that the acquired skills are useful, not only for their future employment but also to improve their problem-solving skills.

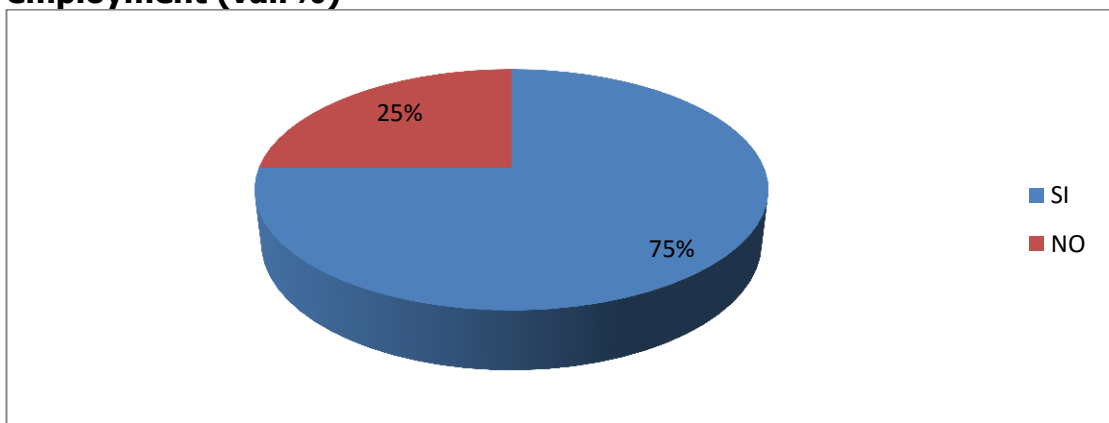

Percentage of the students who believe that the attendance at the Master Course STS is useful for their future employment (val.%)

Database: 89 responses

Students who believe that the acquired knowledge during the classroom training and during internships is useful in their current employment (val.%)

Database: 89 responses
