Keywords	Brief Description
Computer aided drug design	The focus of the research activity is the computer-aided drug design. Thus, the study of the structure, the behaviour and the binding of a small molecule to a defined biological target. The aim of the research effort is the identification of new small molecules with promising biological activity. Together with, the optimization of the pharmacodynamic and pharmacokinetic properties. The research activity takes advantage from both ligand and structure based methods. The main fields of CADD application are: the cancer and illness caused by human pathogens as viral and bacteria. A full description of the research activity is reported in an attached file signed as Attività di Ricerca.
