Part VII – Research Activities

Keywords	Brief Description
Disturbi Minzionali (LUTS) ed Ostruzione cervico uretrale	Gli studi iniziali che corrispondono al periodo di Internato e Specializzazione presso il Dipartimento di Urologia "U Bracci", del Policlinico Umberto 1°, si sono focalizzati sulla ricerca nell'ambito dell'evoluzione dei LUTS, dell'iperattività detrusoriale e dell'ostruzione cervico-uretrale nei pazienti affetti da ipertrofia prostatica, valutando in particolare l'evoluzione clinica ed urodinamica dei pazienti con LUTS dopo terapia medica, terapia chirurgica o in vigile attesa. Negli anni diversi studi hanno valutato il ruolo delle diverse terapie farmacologiche in mono-terapia o in associazione nella gestione dei LUTS da IPB ed i possibili fattori coinvolti nell'aderenza alla terapia.
Spessore Detrusoriale, oggetto endovesicale e diagnosi non invasiva dell'ostruzione cervico uretrale	In collaborazione con l'Università di Teramo, il Charing Cross Hospital di Londra ed il Gruppo della Young Academic Urologist della Società Europea di Urologia è stato sviluppato ed analizzato il ruolo della diagnostica non invasiva ecografica (spessore detrusoriale (DWT) ed oggetto prostatico intravesicale (IPP)) nella diagnosi dell'ostruzione cervico uretrale e della iperattività detrusoriale. Negli anni è stata perfezionata la tecnica ecografica, definiti i cut-off utili per diagnosticare le diverse patologie prostatiche ed in particolare il ruolo predittivo della DWT e dell'IPP nella diagnosi dell'ostruzione cervico uretrale e dell'iperattività detrusoriale. Si sono inoltre sviluppati due nomogrammi (YAU nomogram) per la diagnosi non invasiva della BOO e per la valutazione del risultato terapeutico dopo chirurgia endoscopica della prostata.
Inflammation e Patologie Prostatiche benigne e maligne	Questo settore di ricerca si è occupato negli anni di valutare ed analizzare l'inflammation prostatica come uno dei nuovi possibili pattern etiopatogenetici coinvolti nello sviluppo delle patologie prostatiche benigne e maligne. In particolare, è stato analizzato il ruolo dell'inflammation prostatica e dei diversi pattern molecolari nello sviluppo e progressione dei disturbi minzionali da ipertrofia prostatica e del tumore della prostata. A livello molecolare si è inoltre valutato il ruolo dell'autofagia nella patogenesi dell'inflammation prostatica e dei LUTS. Studi che hanno permesso di essere coinvolti nella stesura delle recenti linee guida Internazionali sui meccanismi dell'autofagia.
Sindrome metabolica/stili di vita e Patologie Prostatiche benigne e maligne	L'esperienza scientifica maturata nell'ambito della relazione tra inflammation e patologie prostatiche è stata tradotta nell'analisi delle interrelazioni tra disturbi metabolici e patologie prostatiche. Ampia parte della ricerca è stata dedicata a questa possibile relazione. In particolare, gli studi, condotti in collaborazione con l'Università di Firenze e la Duke University (USA), hanno permesso primi in Europa di valutare ed investigare il ruolo della Sindrome Metabolica (obesità, dislipidemia, Diabete ed ipertensione) nella patogenesi delle patologie prostatiche. Gli studi hanno dimostrato anche in Europa una forte associazione tra tumore della prostata aggressivo ed obesità/sindrome metabolica. Nell'ambito delle patologie prostatiche benigne la presenza di Sindrome metabolica si è dimostrata come uno dei fattori chiave nello sviluppo di inflammation prostatica e dei disturbi minzionali, inclusa la nocturia. Nello stesso ambito diversi studi hanno valutato il ruolo dello stile di vita dei pazienti ed in particolare dell'attività fisica e del fumo di sigaretta nella patogenesi delle patologie prostatiche benigne e maligne.
Diagnosi del Tumore della prostata	In questo ambito di ricerca si è svolta la tesi di Dottorato di Ricerca conseguito presso l'Università di Roma, La Sapienza riguardante in particolare la diagnosi non invasiva del tumore della prostata mediante apparecchiatura TRIMprobe. Inoltre, questo ramo di ricerca si è arricchito degli studi sul ruolo del PSA come marcatore tumorale ed in particolare sulle possibili modifiche in termini di accuratezza diagnostica del PSA nei pazienti obesi o fumatori, dopo terapia antibiotica o sui possibili cambiamenti dei valori del PSA nel tempo. Il ruolo di diversi ormoni (SHBG, testosterone, estradiolo etc.) è stato valutato come possibile marker o indicatore per la diagnosi del tumore della prostata. Sono state inoltre analizzati diversi nomogrammi (Chun, PCPT etc) e mobile/web app (Coral/Rotterdam) disponibili per la diagnosi e valutazione del rischio di neoplasia della prostata. Di recente in collaborazione con il gruppo della Università di Bruxelles si è valutato il ruolo delle nuove metodiche di imaging (TC PET) nella diagnosi e stadiazione del tumore della prostata avanzato o metastatico.

IPB e Terapia Chirurgica	In quest'ambito di ricerca gli studi si sono focalizzati soprattutto nella valutazione dell'efficacia di nuove tecniche chirurgiche mini-invasive per il trattamento dei LUTS da IPB. In particolare, gli studi hanno valutato il ruolo della TURP bipolare, della vaporizzazione foto selettiva della prostata mediante l'impiego dei diversi laser Greenlight che sono stati introdotti nel mercato negli ultimi 10 anni, della TUNA, della vaporizzazione mediante laser Tullio e delle diverse terapie intraprostatiche.
Tumore della prostata resistente alla castrazione	Questo settore della ricerca si è occupato di recente delle nuove molecole disponibili per la terapia del tumore della prostata resistente alla castrazione. In particolare, in collaborazione con diversi centri Italiani si è sviluppato ed analizzato un registro di <i>real-life</i> che ha permesso di confrontare l'efficacia e la sicurezza clinica delle nuove molecole verso i dati presenti negli studi registrativi. Una recente analisi del database Europeo EudraVigilance ha permesso inoltre di valutare e confrontare gli eventi avversi secondari alle nuove terapie (Enzalutamide, Abiraterone, Radium) impiegate nella gestione dei pazienti con tumore della prostata metastatico e resistente alla castrazione.
Tumore del rene: fattori prognostici e chirurgia	In collaborazione con i principali gruppi Europei (CORONA, RESURGE, SATURN), questo settore della ricerca si è occupato di analizzare un database di oltre 10000 casi di tumore del rene al fine di valutare i principali fattori prognostici e di risposta clinica nella gestione chirurgica della neoplasia del rene. Sono stati inoltre valutati il ruolo della chirurgia conservativa renale vs chirurgia radicale e della terapia chirurgica nei pazienti anziani.
Tumore della Vescica: terapia endovesicale e derivazioni urinarie	In quest'ambito di ricerca si è svolta la tesi di Specializzazione in Urologia conseguita presso l'Università di Roma "La Sapienza". I primi studi si sono focalizzati soprattutto nella diagnosi e terapia di tumori non muscolo invasivi della vescica ed in particolare sul ruolo di nuovi marcatori (FISH) e del 5ALA nella diagnosi dei tumori della vescica. Si è valutato successivamente nuovi possibili protocolli di instillazioni endovesicali con BCG (alternativi a quello proposto da SWOG) o con mitomicina (early single). In ambito chirurgico la ricerca si è soffermata soprattutto su un'analisi strutturata, mediante il sistema Clavien modificato, delle complicanze legate alla TURB ed alla cistectomia. Gli studi più recenti hanno valutato il ruolo della cistectomia robotica e delle diverse derivazioni urinarie soprattutto nei pazienti anziani.
Tumore del Pene	In collaborazione con diversi centri Nazionali ed Internazionali (Gruppo PECAD), in questo ambito si è valutato soprattutto l'aderenza alle linee guida Internazionali nella gestione chirurgica delle patologie del pene. I risultati hanno sottolineato l'importanza di aderenza alle linee guida Internazionali al fine di ottenere i migliori risultati terapeutici
Calcolosi Urinaria	L'esperienza scientifica in quest'ambito si è focalizzato soprattutto sulla terapia chirurgica della calcolosi urinaria sviluppando e validando nomogrammi in grado di predire lo <i>stone free rate</i> dopo chirurgia endoscopia ureterale o analizzando il ruolo di tecniche robotiche o percutanee nella gestione della calcolosi a stampo renale.
Andrologia, chirurgia uretrale ed infertilità	In quest'ambito le linee di ricerca riguardano soprattutto la possibile associazione tra LUTS e deficit erettile con un particolare interesse nel ruolo svolto dal fumo e dalla sindrome metabolica. Diversi studi hanno inoltre valutato le diverse tecniche di recupero degli spermatozoi (micro TESE) o la <i>testis sparing surgery</i> nei pazienti con tumore del testicolo. In collaborazione con l'Ospedale di Arezzo si è valutato inoltre i risultati a lungo termine della chirurgia dell'uretra bulbare e l'impatto di questa chirurgia sulla funzione sessuale.
