Part VII – Research Activities

Keywords	Brief Description
Occupational Health	My research activities have involved the following main topics: (1) infectious diseases (with a specific focus on pathogens associated with travel medicine practice and respiratory pathogens such as SARS-CoV-2, influenza, pneumococcus, hMPV, and RSV) and their preventative options in the general population and more precisely in occupational settings; among non-occupational respiratory pathogens I've assessed in particular details (either by means of cross-sectional KAP studies, and by meta-analysis studies) the impact of RSV in high-risk population groups. More recently, I've applied the systematic review and meta-analytical approach for gathering available evidence on new pathogens of potential occupational groups (i.e. WNF, TBV, CCHF, NIPAH virus); (2) impact of
Infectious diseases	
Respiratory diseases	
Musculoskeletal disorders	
Vaccine preventable diseases	
Diagnostic accuracy	
Heat-related diseases	

heat and solar radiation on occupational health groups, including the potential impact on occupational injuries (in agricultural and construction settings) and the risk for skin cancers associated with prolonged exposure to solar radiation; (3) I've performed several KAP studies on the acceptance of vaccinations and immunizations associated with occupational settings (e.g. tetanus, pertussis, COVID-19, etc.) in order to identify barriers and facilitators; (4) before and during the SARS-CoV-2 pandemic, I've participated into a series of studies on diagnostic accuracy; during the pandemic, I've specifically focused on the diagnostic accuracy of testing for SARS-CoV-2 on blood, nasal, and salivary specimens, as well as on exhaled breath condensate; (5) in the past, and still ongoing during my current commitment into the NHS as Occupational Health and Safety Officer, I'm contributing into a series of researches on musculoskeletal disorders, specifically focusing on professionals involved in home care.
