Research Activities

My research interests are mainly oriented towards the study of cognitive processes from both basic and applied science perspectives. Research topics include Executive Functions and Inhibitory Control (e.g., Sdoia & Ferlazzo, 2016), Timing of attention (e.g., Sdoia et. al. 2019) in reading abilities (e.g.,

Costanzo et al, 2016), Cognitive functioning in clinical populations (e.g., Foti, Sdoia et al, 2015), Attentional control processes in both spatial (e.g., Di Russo et al, 2012) and temporal domains (Sdoia & Ferlazzo 2012), Cognitive flexibility and task switching abilities (e.g., Sdoia & Ferlazzo 2008), Object-motion and self-motion perception (e.g., Pitzalis, Sdoia et al, 2013), Behavioral performance and sleep activity (e.g., Couyoumdjian, Sdoia et al, 2010). All these research lines share my personal interest toward the study of how cognitive processes mediate human-environment interaction.

Research topics are mostly investigated by means of behavioural methods, such as Reaction Times, Error rate and Eye-movements Tracking (e.g., Sdoia & Ferlazzo, 2016). Combined electrophysiological-imaging techniques are also used (e.g., Pitzalis, Sdoia et al., 2013) as well as non-invasive brain stimulation technique (e.g., Sdoia et al. 2019) to address theoretical cognitive hypothesis. Also, the replicability issue affecting many of the cognitive studies, and these days under scrutiny by the scientific community has been addressed through statistical resampling/simulation techniques (bootstrap & Monte Carlo e.g., Ferlazzo & Sdoia, 2012).
