Part XI – Research Activities

Keywords	Brief Description
Experimental Economics	My research specialism is the analysis of data from economic experiments and their behavioural implications. I analyse data from experiments on choice under risk and ambiguity, strategic interactions (social dilemmas and allocation games), coordination games (social network), and so on, for which I develop original estimators. I am particularly concerned with the respect of the nature of the data and of between- and within-individual heterogeneity. I also have research interests in Monte Carlo simulations, discrete choice models, and structural modelling.
