Part IX – Research Activities

Keywords	Brief Description
Lung immunobiology Stem cells Ischemia reperfusion injury Inflammation	I started my research activity as Research Fellow at Washington University in Saint Louis (MO, USA), an internationally recognized research centre, working on adoptive and innate immunity in lung transplant and Lung Cancer. I have still maintaining a strong collaboration with Washington University from years, retaining a instructor position and specializing myself in animal microsurgical techniques, mechanistic studies and imaging. Supported by my extensive experience in lung cancer surgery I directed my research onto tumor-related lymphocytes and neutrophils activity in lung cancer, ischemia/reperfusion injury and acute lung injury after lung surgery (sleeve lobectomy). Furthermore, I addressed my research towards GMP focusing on mesenchymal stem cells and their role in lung cancer microenvironment.
