## Part VII – Research Activities

Keywords	Brief Description of main lines of research
<ul style="list-style-type: none"> <li>✓ Burnout</li> <li>✓ Work engagement</li> <li>✓ Self-efficacy</li> <li>✓ Personal Resources</li> <li>✓ Stress outcomes</li> <li>✓ Work Addiction</li> <li>✓ Employability</li> <li>✓ Psychological Test</li> </ul>	<p><b>1. Work-related stress factors, burnout and their organizational consequences.</b> Since 2007, I worked on the development and validation, on a sample of 6000 people, of a new dimension related to burnout, labelled “Interpersonal Strain at Work (ISW)” which intends to recapture and value the original interpersonal component of burnout (depersonalization) but generalized to the different relationships at work (clients, colleagues, supervisor). Then I focused on the differential role of individual (self-efficacy) and team level work characteristics (job demands and resources) on burnout process and organizational consequences from a multilevel perspective. I also worked on different methodologies to assess psychosocial risk factors (i.e. check lists, focus group, questionnaire, objective indicators). I am now part of the International BAT Consortium, an international group for the validation of a new tool to assess burnout, the Burnout Assessment Tool that involves 23 countries.</p> <p><b>2. Passion for work: the positive and the negative side.</b> I investigated the positive antecedents (such as self-efficacy, psychological capital and contextual social resources) and organizational consequences of work engagement. I also studied the negative side of overworking represented by workaholism, collaborating at the Italian validation of the DuWAS (Dutch Work Addiction Scale) and its relationship with burnout, presenteeism, health and performance.</p> <p><b>3. Personal resources, proactive work behaviours and employability:</b> since 2016 I am part of an interdisciplinary team (management and organizational psychology scholars) that conducted a large national study on temporary workers (in collaboration with Ebitemp and University of Naples Federico II (Scientific coordinators: Prof. Stefano Consiglio),) in which about 11.000 data were collected on satisfaction, well-being, job insecurity and dual commitment of agency workers. I collaborated with Regione Lazio in two research projects devoted to investigate the role of personal resources and active job search behaviours on occupational outcomes among dismissed (Almaviva) and unemployed workers (Neet).</p> <p><b>4. Tools and methods for personnel evaluations.</b> A third line of research is in the area of Personnel Psychology, concerning the development of test and tools for selection and assessment processes. I co-authored psychological tests to measure different individual characteristics such as: Big Five Competency Grid (a competency framework in line with the Big Five personality model), WVal (Work Values Questionnaire, framed within the Schwartz's personnel values model), MyD (MyDrive, a questionnaire to measure individual motives relevant for organizational life), LOGIC (a battery of 5 tests to measure mental ability and critical reasoning).</p>
