Part VII – Research Activities

Keywords	Brief Description
Cancer	The research activity is closely linked to clinical activities and aimed at the different areas of maxillo facial surgery, with peculiar reference to oncological pathology and technical innovations. In recent years, research activity has been focused on robotic technologies for the treatment of pathologies in the head and neck district. Under the guidance of Prof. Valentino Valentini, head of the maxillo facial surgery unit at Policlinico Umberto I of Rome, this research resulted in the creation of a robotic program for maxillo facial surgery. Moreover, thanks to a constant and deep participation in congresses and courses, a large national and international collaborative network has been created, as shown by the active participation to several ongoing multicenter trials.
