ATTIVITÀ SCIENTIFICA

Paolo Mataloni ha pubblicato più di 160 articoli scientifici su riviste JCR, con più di 4000 citazioni, h-index 33 su WOS (Google Scholar: 6223, 41).

La sua attività di ricerca ha riguardato lo studio dei fenomeni ottici non lineari in solidi e molecole, degli effetti ottici ultraveloci nella materia; dei fenomeni di emissione spontanea e stimolata e di superradianza all'interno di microcavità ottiche planari e in microlaser.

Negli ultimi 15 anni ha condotto numerosi esperimenti nel campo dell'informazione quantistica, riguardanti la generazione, rivelazione e caratterizzazione di stati di fotoni entangled, la non località quantistica, gli stati di fotoni hyperentangled e gli stati cluster a molti qubit e le loro applicazioni alla computazione e alla comunicazione quantistica, la Non-Markovianità e lo studio della dinamica di sistemi aperti. Particolarmente degna di nota è la realizzazione di una serie di esperimenti riguardanti l'uso dei sistemi fotonicci integrati in guida d'onda finalizzati alla miniaturizzazione e alla integrazione di sistemi e di protocolli di informazione quantistica, con innovative applicazioni nella computazione e nella simulazione quantistica.

Paolo Mataloni ha tenuto più di 100 seminari e relazioni su invito in numerose università e conferenze nazionali e internazionali.
