## Part VII – Research Activities

Keywords	Brief Description
Electrophysiology	<b>I am a Researcher in Physiology.</b> I graduated in “Medicine and Surgery” in July 2014 and then I obtained a PhD in “Clinical/Experimental neuroscience and Psychiatry – Neurophysiology Curriculum “in 2018. Until now I worked in the field of neurophysiology and electrophysiology, using electrophysiological approaches for the functional study of GABA, glutamate and acetylcholine receptors. Furthermore, I study synaptic transmission in physiological and altered neurodevelopment. Moreover, I study the function of nicotinic acetylcholine receptor in human amyotrophic lateral sclerosis, both as a pathophysiological mechanism and a possible therapeutic target.
GABA <sub>A</sub> receptors	
AMPA receptors	
Muscle	
Nicotinic Acetylcholine receptors	
Epilepsy	The <b>research techniques</b> I mainly use are: two-electrode voltage clamp and analysis, patch-clamp recording and single channel analysis, field potential recordings and analysis on brain slices. Additionally, in Amsterdam University I gained experience in transcriptomics analysis, immunohistochemistry and RT-PCR applied to the study of neurotransmitters’ function in neuroinflammatory processes.
	During my career, I had several national and international collaborations with: - <b>University of Amsterdam</b> (Prof. Eleonora Aronica) - <b>Instituto de Medicina Molecular</b> (Prof. Ana Sebastião) - <b>Università “Magna Graecia” di Catanzaro</b> (Prof. Gianni Cuda, Prof. Antonio Gambardella) - <b>Università di Kuopio (Finlandia)</b> , Prof.ssa Asla Pitkanen
