

Le domande chieste in lingua inglese ai candidati riguardano i seguenti elementi di verifica.

D1: Describe the content of the columns in this eye-tracking data file.

D2: Describe what are linear-mixed effect models and their characteristics (i.e., random effects)

D3: Read this MATLAB script, explain what computation it is doing.

D4: Describe models of visual long-term memory, theories of attentional selectivity, and insights about their potential interplay.

D5: Describe how can we assess cognitive ageing (e.g., MoCA test), longitudinal experimental methods, its pros and cons.

D6: Suppose you have a conflict with any of your colleagues, or principal investigator, how would you resolve it?

D7: What would be your theoretical contribution to the project you have applied for?
