Part VII – Research Activities

Keywords	Brief Description
Advanced MR	Research activities on MRI application in oncology. Focus on prostate and

imaging	bladder cancer.
Bladder Cancer	Multiparametric MRI of the Bladder for optimization of disease staging and validation of the VI-RADS score for differentiating T1 stage from T2 stage bladder cancer: non-muscle-invasive versus -muscle-invasive tumors. Promotion of the structured report for bladder MRI and delineation of the. Multiparametric MRI and nac-VIRADS development and validation for assessment of response to neoadjuvant systemic therapy, in patients with MIBC or those eligible to trimodal therapy (TMT).
Prostate Cancer	Several studies on the role of multiparametric MRI and targeted MRI-guided biopsy techniques as "first line" for early detection of prostate cancer. Also, studies on the role of MRI as preoperative staging tool and as screening test in a randomized controlled trial (PROSA trial). Specific interest, on the role of MRI in patients with biochemical recurrence after whole gland therapies. Multireader validation study on PI-RR scoring published on Radiology.
Computational Medicine	Studies on the role of network analysis for the identification of promising plasma circulating molecular biomarkers, and their correlation with MRI biomarkers and clinical data for a non-invasive early diagnosis of clinically significant PCa and prediction of cancer tissue aggressiveness. Proposal of an integrated pathway with a clinical utility as a prebiopsy triage of patients at a risk of developing csPCa.
Education	Research activities on the role of AI and education programs for residents.
