Thesis Study about Reduction of Biological Sludge Production Combining Uncoupling Metabolism and Endogenous Respiration in Biological Wastewater Treatment with Sequencing Batch Reactors

09/2024 – 12/2024 Valencia, Spain

ERASMUS+ Universitat Politècnica de València

Laboratory Experimentation in collaboration with the Faculty of Industrial Engineering and Chemical Engineering at the Polytechnic University of Valencia.

The aim of the project is to study the reduction of biological sludge production generated during biological removal processes in the context of wastewater treatment during a three-month analysis period. The study involves combining the use of metabolic uncouplers and compounds that accelerate the endogenous respiration of microorganisms within SBR reactors to increase the endogenous respiration coefficient.
