#### **Scientific interests and research expertise:**

- Definition and construction of indicators and systems of indicators
- Statistics and complexity (definition of indicators and statistical analysis in complex system; forecasting in complex systems).
- Composite and synthetic indicators (proponent of innovative approach for synthesizing indicators).
- Survey design and analysis, with focus on questionnaire construction and definition, and sampling design.
- Social Indicators.
- Social indicators and Big Data.
- Big Data and Official Statistics.
- Representing and communicating complex data
- Statistics and political communication.

Domains of application:

- Quality of life, quality of society; wellbeing measurement and analysis.
- Beyond GDP indicators.
- Inequalities and Sustainability indicators.
- Measuring deprivation and poverty.
- Data revolution
- Big Data, Data Mining, Algorithms and their social implications.

In this moment, interests are focused on:

- o mining social indicators from Big Data;
- o analytical approaches in complex system: the case of social sustainability
- o forecasting in complex systems: from observing change to sketching futures (complexity and uncertainty: a socio-economic-environmental approach to the definition of futures in the perspectives of sustainable development
- o innovative approaches to synthesizing indicators; managing and synthesising indicators in complex systems (Poset, self-organizing maps, graph theory, ...)

On these topics, she is author, editor and co-editor of several publications, volumes and books, mainly in international contexts.

#### **Academic teaching**

##### **Topics**

- (i) definition and construction of indicators and their synthesis;
- (ii) data production (surveys, assessing subjective data);
- (iii) data analysis (multivariate and dimensional analysis, scaling models, ...)

- (iv) data presentation and communication (assessing quality of communication in statistics);
- (v) big data and social indicators;
- (vi) big data and official statistics;
- (vii) statistical methods for complexity.

**Courses** (from 2000)

**University official courses:** *Statistical indicators: theory, methods and applications, Big Data for Official Statistics, Statistical Methods for Official Statistics, Social Statistics, Survey Methods, Statistics for Social Research, Statistics Applied to Educational Research, Statistical Data Analysis* (Multivariate Analysis Techniques, Dimensional Analysis, Item Analysis), *Multivariate Statistics for Social Research, Measuring and Statistical Analysis of Subjective Data, Social Indicators.*

Seminars and lectures regularly held for different Ph.D programs in several Universities, in Italy and abroad.

# 1. RESEARCH

## 2.1 RESEARCH INTERESTS

- **Social Indicators**
  - Defining, constructing and implementing systems of indicators
  - defining models aimed at integrating subjective and objective indicators observed at micro and macro level and with reference to different perspectives (territorial-spatial, temporal, groups and typologies, and so on).
  - Defining and constructing systems of indicators in order to monitoring and evaluating public organizations and services (schools, universities) and establishing the role of subjective indicators in these systems
- **Synthesis of indicators**
  - Traditional approaches (composite indicators)
  - New and alternative approaches to synthesis of indicators (POSET Theory, Rasch models)
- **Quality of life, quality of society, wellbeing measurement and analysis**
  - Defining and assessing the methodological process aimed at measuring (at micro and macro level) and monitoring the progress of societies and societal well-being.
- **Beyond GDP indicators**
- **Inequalities and Sustainability indicators**
- **Measuring deprivation and poverty**
- **Social indicators and Big Data**
- **Big Data and Official Statistics**
- **Data revolution**
- **Statistics and political communication**
  - Presenting and communicating statistical data and results: principles and components. Towards a model aimed at assessing the quality.
- **Statistics and complexity**
  - Definition of indicators and statistical analysis in complex systems.
  - Forecasting in complex systems.
- **Artificial intelligence, ethics and laws**
  - Definition of algorithms and social legitimacy

In the past, she conducted research works aimed at constructing computerized information systems supporting public intervention directed to population groups at high risk (elderly and young people, mental patients, etc.). In this perspective, she took part in experimental projects aimed at constructing monitoring systems supporting social- and health-systems.

## 2.2 EXPERTISE

- Data production**
- (i) Social survey project: wide experience in designing and planning surveys projects applied in epidemiological, psychological and social fields, conceived also in the perspective of defining and developing observatories (longitudinal perspective), by focusing on questionnaire construction and definition, and sampling design.
- (ii) Assessing subjective data:
- constructing instruments aimed at measuring subjective traits and dimensions (questionnaires)
  - assessing measurement (in terms of precision and accuracy) through the application of item analysis techniques (testing scaling models)
  - applying statistical analytical methods aimed at investigating multivariate and dimensional hypothesis and at comparing within-individuals and between-individuals
- Data analysis**
- multivariate and dimensional analysis
  - scaling models
  - construction of synthetic indicators
- Data presentation and communication**
- assessing quality of communication in statistics
- Statistical methods for complexity**
