## Employment

---

- Sep '22 – present **Tenure-track Researcher (RTD-B)**, Sapienza Università di Roma, Italy
- Oct '21 – Sep '22 **Postdoctoral Researcher**, Leiden University, The Netherlands
- Jan '19 – Sep '21 **Senior Researcher**, Microsoft Quantum Lab Delft, The Netherlands.
- Jun '17 – Dec '18 **Researcher**, Microsoft Quantum, Station Q, Santa Barbara, U.S.A.
- Oct. '15 – May '17 **Postdoctoral Associate**, Yale University, U.S.A.  
Postdoc advisor: [Leonid Glazman](#).

## Education

---

- June '11 – Sep '15 **Ph.D.**, Universiteit Leiden, The Netherlands  
PhD advisor: [Carlo Beenakker](#)  
PhD co-advisor: [Anton Akhmerov](#) (TU Delft)
- Dec. '08 – May '11 **M.Sc. cum laude**, Physics, Sapienza Università di Roma, Italy
- Sep. '05 – Dec. '08 **B.Sc. cum laude**, Physics, Sapienza Università di Roma, Italy

## Distinctions

---

- In 2018, I was selected as an [Outsanding Referee](#) by the American Physical Society.
- In 2016, I was granted a [Marie Skłodowska-Curie Global Fellowship](#) of the European Commission (declined). My proposal obtained a score of 94.80/100.
- In 2016, I was awarded the [Christiaan Huygens prijs](#) for my PhD thesis (see the [announcement](#), in Dutch). The prize is awarded to the best Dutch PhD thesis in physics in a five-year period.
- In 2015, I was one of the seven young scientists selected by the Royal Netherlands Academy of Arts and Sciences to participate in the [65th Lindau Nobel Laureate Meeting](#), Lindau, Germany, 28 June-3 July 2015.

# Narrative CV

---

*Summary.* I am a condensed matter physicist interested in mesoscopic physics, topological phases of matter, quantum computing, and open quantum systems. I have mainly worked on theoretical projects, but I have acquired experience in running simulations and in doing experimental work with quantum devices at low temperatures. I am also interested in macroscopic quantum phenomena and the history and foundations of quantum mechanics.

*PhD research (2011-2015).* My PhD research was focused on the development of a theory of superconducting circuits in the presence of Majorana zero modes. This focus was complemented by separate works on disordered systems, non-Abelian anyons, and Josephson junctions. Most of my studies were done in the context of the rapidly expanding fields of topological quantum computations and topological aspects of condensed matter physics in general. My PhD Thesis won the Christiaan Huygens prize in 2016.

*Postdoctoral research (2015-2017).* During my postdoc at Yale University under the supervision of Leonid Glazman, I have focused on the theoretical interpretation of experimental data on proximitized nanowire devices. In 2015 and 2016 I collaborated with the groups of Leo DiCarlo and Leo Kouwenhoven at TU Delft, the Netherlands on two different projects which realized the first prototypes of superconducting circuits involving nanowires and measured the excitation spectrum of a nanowire Josephson junction. I also investigated the transport signatures of the Majorana topological transition in the Coulomb blockade regime.

*Research at Microsoft Quantum (2017-2021).* My work continued organically during my tenure with Microsoft Quantum, which started at Station Q in Santa Barbara, U.S.A. and continued in Delft, the Netherlands, after an extended visit at the Center for Quantum Devices in Copenhagen. During this time, I have been heavily involved in the effort to systematize the search for Majoranas by promoting a data-driven approach to transport measurements, and I have been driving research on cQED devices with semiconductor-based Josephson junctions. As part of my research duties, I have been collaborating with the experimental part of Microsoft's quantum computing program daily, contributing to both the conceptual design of experiments and the interpretation of the data as well as, on some occasions, the experimental measurements themselves. In 2020-2021, I supervised a team of two simulation engineers for in-house realistic simulations of hybrid devices, as well as three PhD students performing experiments on hybrid superconducting qubits.

*Research at Leiden University (2021-2022).* In September 2021 I left the quantum industry in order to return full-time to pure, curiosity-driven research. I joined the [experimental team](#) of Prof. Tjerk Oosterkamp at Leiden University, working on low-temperature [magnetic resonance force microscopy](#) techniques.

*Research at Sapienza (2022-present).* Current research focuses on diverse topics in condensed matter and quantum physics: an open quantum systems approach to Majorana zero modes embedded in a disordered, gapless systems; the design of quantum devices based on Andreev spin qubits; quantum phase slips in hybrid superconducting devices; and the proximity effect and topological phase diagrams in germanium-based heterostructures.

## Teaching

---

- **since 2023-24**: Meccanica Quantistica e Statistica, corso di laurea triennale in Fisica (curriculum Astrofisica), Sapienza Università di Roma.
- **2022-23**: Fisica 2 per Scienze Chimiche, corso di laurea triennale in Scienze Chimiche, Sapienza Università di Roma.
- **Course staff** for the massive online open course [Topology in condensed matter](#), initially hosted on edX (2015-2016).
- Delivered a **lecture series** on quantum computation with Majorana zero modes for experimental groups at TU Delft (2015).
- **Teaching assistant** for a course in Quantum Mechanics at the undergraduate level, held by dr. Peter Denteneer at Universiteit Leiden (2015-2016).

## Refereeing

---

I have refereed scientific articles for the following journals: Nature, Nature Electronics, Physical Review Letters, Physical Review A, Physical Review B, Physical Review X, SciPost Physics, New Journal of Physics, Reports of Progress in Physics, Europhysics Letters, Journal of Physics: Condensed Matter, Nano Letters,

## Presentations

---

1. *How to make a superconducting spin qubit and why*, Collective Phenomena Group Meeting, Theoretical Condensed Matter Group, Cambridge University, UK, 22 May 2024.
2. *The quantum non-locality of Majorana zero modes*, Premio Ugo Fano 2024 – Cento anni dalla nascita della meccanica quantistica, Roma, 22 March 2024.
3. *Topology and protection in superconducting qubits*, Physics & Topology Workshop, Sapienza Università di Roma, 30 January 2024.
4. *How to make a superconducting spin qubit and why*, Nano & Quantum Physics Seminar, University of Basel, 15 May 2023.
5. *Making a superconducting spin qubit in a quantum-dot Josephson junction*, 57th Rencontres de Moriond, La Thuile, Italy, 28 March 2023.
6. *Protecting quantum states in condensed matter*, invited seminar at Sapienza Università di Roma, Italy, 11 July 2022.
7. *Study and control of bound states in superconducting junctions*, invited seminar at Sapienza Università di Roma, Italy, 21 June 2022.
8. *Some recent results in cQED with hybrid nanowires*, invited seminar at ISTA, Vienna, Austria, 17 May 2022.
9. *Transmon-based spectroscopy of an Andreev quantum dot*, invited online talk at the IOP CMD online series “Bound states in hybrid semiconducting-superconducting devices”, 28-29 June 2021.
10. *cQED with hybrid superconducting-semiconducting devices*, RWTH Aachen, Germany, 13 February 2020.
11. *cQED with Majorana devices*, workshop “Enabling Quantum Leap: Braiding and Fusing Majoranas”, University of Maryland, College Park, USA, 10 July 2019.
12. *Simulating the response of a Majorana transmon device*, APS March Meeting, Boston, USA, 7 March 2019.
13. *Topological superconductivity in proximitized full-shell nanowires*, APS March Meeting, Boston, USA, 7 March 2019.
14. *Topological quantum computing with Majoranas: the search for robust designs*, workshop “Majorana modes and beyond”, MagTop IF PAN, Warsaw, Poland, 27 February 2019.
15. *Coulomb blockade in proximitized nanowires*, Leiden University, the Netherlands, 11 October 2017.
16. *Andreev bound states in nanowire Josephson junctions: theory of microwave spectra*, Monday lunch seminar, Yale, USA, 27 March 2017.
